(54) Title: ELECTRIC APPARATUS AND METHOD OF COMMUNICATION BETWEEN AN APPARATUS AND A USER

(57) Abstract: An electric apparatus and a method of communication between an apparatus and a user are described. The apparatus comprises sensor means, for example, a camera (18) for detecting objects (34, 36) in its proximity. The position of objects (34, 36) is stored in a memory (M). A directional pointing unit (20), for example, in the form of a mechanical pointing element or with a light source for generating a concentrated light beam (40) can be directed onto objects in the proximity of the apparatus. In a dialog, the corresponding object can thus be pointed out to a human user.
